La Sorbonne University , Paris, France Course de Civilisation Française	January 2018-May 2018

Research Experience

The Jackson Laboratory (JAX) , Bar Harbor, ME Research Data Analyst I	June 2020 - present
---	---------------------

Topic: A Bayesian approach to mediation analysis of complex traits with measurement noise

- Contributing to the development and validation of an R package implementing a Bayesian model selection approach to mediation analysis that is flexible in both data inputs and possible inferences, and extending it to allow for inference of moderated mediation
- Diagnosing the effect of measurement noise in the inference of mediation
- Applying developed tools to identify the effect of sex and diet on mechanisms of protein expression in Diversity Outbred Mouse Liver

UConn Health Center for Quantitative Medicine , Farmington, CT Undergraduate Research Assistant	September 2018 - May 2020
---	---------------------------

Topic: A quantitative pipeline for cancer reversion analysis in triple negative breast cancer

- Awarded a Summer Undergraduate Research Fund through UConn to fund my work
- Constructed a static intracellular signaling network for a claudin-low triple negative breast cancer (CL TNBC) cell line with multi-omics data using Cytoscape and GeneXplain
- Applied a structure-based control method for nonlinear systems implemented in python to identify putative targets that can steer the system to any desired attractor
- Conducted virtual screenings using the topology of the network and a signal propagation algorithm to identify concerted perturbations of control targets resulting in reversion of the CL TNBC phenotype

Metrum Research Group , Simsbury, CT Summer Intern	June - August 2018
--	--------------------

Topic: Developing an open and general maternal-fetal physiologically based pharmacokinetic model for drugs metabolized by cytochromes P450 isoenzymes

- Modeled maternal and fetal drug exposures at different gestational ages by incorporating anatomical, biochemical, and physiological changes associated with pregnancy as a system of differential equations using R and *mrgsolve*
- Performed local sensitivity analysis, optimized model parameters, and validated the model by comparing model predictions to external published data

University of Connecticut , Department of Molecular and Cellular Biology, Storrs, CT Undergraduate Research Assistant/Holster Scholar	January - September 2017
---	--------------------------

Topic: The effect of host genetic variability on Epstein Barr Virus (EBV)-derived cancer susceptibility

- Reviewed relevant literature to identify genes that may impact EBV-derived cancer susceptibility
- Utilized wet lab techniques such as Polymerase Chain Reactions, Gel Electrophoresis, Cloning, and Sanger Sequencing to sequence the genes of interest in several EBV-derived cancer cell lines
- Aligned the genetic sequence of target genes to identify common and distinct single nucleotide polymorphisms across EBV-derived cancers using the software Geneious and BLAST
